## Priyanka laughs off sexist remark by BJP's Katiyar

**New Delhi:** Senior MP Vinay Katiyar sparked a storm of criticism on Wednesday when he said the BJP had "more beautiful" campaigners than Priyanka Gandhi Vadra, inviting a sharp retort from the young leader who said the remarks exposed the saffron party's mindset towards women.

Katiyar's remarks came barely hours after another senior politician, JD (U)'s Sharad Yadav, said "izzat (honour)" of a vote was more important than that of a daughter.

The sexist statements come at a time when campaigning for five state elections, including the one in Uttar Pradesh, is picking up. The BJP distanced itself from Katiyar, saying it didn't approve of his remarks. Asked about the Congress naming Priyanka as one of its campaigners in Uttar Pradesh, Katiyar said: "It doesn't matter... there are girls and women who are more beautiful than her. Some of them are artists and heroines... I think Smriti Irani is beautiful and she is also campaigning." Priyanka, credited by the Congress for the crucial poll tie-up with the ruling Samajwadi Party in UP, scoffed at the comments. "Hahaha... He's right... they do! And if that's all he sees in my colleagues who are such strong, brave and beautiful women that have battled through all sorts of hardship to get where they are, then he makes me laugh even more," the 45-year-old said.

## Developing Global Workforce & Future Ready Citizens

"We cannot always build the future for our youth, but we can build our youth for the future." This quote of Franklin D. Roosevelt, the 32nd President of USA, is very relevant and fitting for India today. As we are on the eve of the 68th Republic Day of our country, it is important to focus on how India could be a hub of Global Workforce and be a blessing to the whole world in near future. If one were to glance at the demographics of India, one would only be filled with awe and wonder to notice the huge youth population in the country. Today, India is the second most populous country in the world, with 1.3 billion people that is almost a fifth of the world's population. Moreover, India has more than 50% of its population below the age of 25 and more than 65% below the age of 35. Scholars and experts have forecast that by 2020, the average age of an Indian will be 29 years, compared to 37 for China and 48 for Japan. India can boast of

being the youngest country in the whole world with its largest youth population. Although the future remains unknown and uncertain as changes are taking place at a very rapid pace almost in every segments, India can definitely prepare our youth as a powerful workforce for the future that lies ahead of us.

The promising demographic figures above only indicate that our youth is the hope for India to be a superpower soon. Being among the emerging economies, India has the potential to be ahead on the development curve. Our world is constantly evolving and undergoing transformation in various sectors and if Indian youth is nurtured well with skills, they can make a positive impact in the global arena. This is possible only if there is development taking place in major areas such as education, healthcare, industry, housing, environment, connectivity and recreation facilities in both urban and as well as rural

areas of our country. Education holds the number one priority along with healthcare. Holistic quality education is the key to nurture future ready citizens of the world. The demographic dividend to be productive needs to be in good health and fit for the job and therefore healthcare services are immediate and necessary. Education is the answer to all these and every good thing will only result from quality education. Nelson Mandela has rightly said, "Education is the most powerful weapon which you can use to change the world."

India has been the cradle of producing and giving the world the best scientists, engineers, global entrepreneurs, doctors, academics and business leaders who have made

and continue to make immense contribution globally. Even today our youngsters are full of energy and have high expectations. There are thousands of bright eyed youngsters looking forward to surge the pinnacle of success through right opportunities. However, the caution is that if they are not properly educated and motivated, our country will continue to remain merely a developing country, in spite of having such a large youth population and will miss the golden opportunity of being the World Leader.

It is high time that we realise the importance of taking the right steps in education to prepare our youth for tomorrow and beyond and develop

them as "Global Workforce and future ready citizens". Providing education with technology integration and hands on learning experience will equip our youngsters to be prepared for the global industry demands and get employment. This calls for dedicated and consistent efforts primarily to bring about paradigm shift in our education system. Let poor quality education not be the excuse for India's economic revolution and progress.

At the grass-root level, we need to make teaching and learning a child centric process. There is an enormous responsibility upon the educators to identify the future skills and possible nature of jobs in order to equip the next generation workforce with right skills needed to succeed. Educational institutions at all levels need to focus on inculcating 21st century learning skills among our youth by providing equitable access to technology and information from cities to the remotest villages of our coun-

try. Yet another aspect that needs to be considered on priority basis is that of educating the whole person and grooming the emotionally strong individuals with decision making ability that would be valued and respected globally by the employers.

Building up a cross silo community will enhance the entire learning and teaching process in developing future ready global workforce. Greater emphasis on girl child education across the nation will certainly open up entirely a new window of progress and advancement at the global platform.

Only prudent investment in skilling and education of our vibrant youth will see India soar the heights of success and be a Global Leader. I wish you peace, prosperity and a bright future.

Let us together with Rabindranath Tagore say, "Into that heaven of freedom, my Father, let my country awake."  
- Dr. A F Pinto

## Save Girls from Telescoping Effects of Addictive Substances

**Udaipur:** While speaking on the eve of Carrier day on the birth day of Swamy Vivekanand Dr P.C. Jain who is engaged in De-Addiction Awareness Program said here in Mahila I.T.I Pratap Nagar that they should save themselves from the highly addictive effects of the substances like Alcohol, Tobacco, Gutkha, Opium Supari because the girls become addictive to them more quickly as compared to the boys especially to the Tobacco & they have more negative & severe withdrawal effects.

This is mentioned in the recently released report of America "Facing Addiction America" Narrating about the comparative effects of Addictive substances between Male & Female about the Tobacco, Alcohol he showed that they have got double bad effects of these substances because of their biological body difference. During pregnancy if substances abuse is done than it will affect the child which may be born defective & his or her chances of becoming addict in the future is also very much possible.

Saying about one news item published in news paper which is depicting the picture of a child dying of drowning in a swimming pool while his mother is looking the mobile, forgot about her son, he said this Digital Addiction is now increasing & showing its bad effects similar to drugs like cocaine in the MRI of the brain. Digital Addiction is more difficult to treat than the substances Abuse Addiction. He advised the would be mothers to be careful about this addiction & do not make their kids addicted to Mobile or any digital gadgets while feeding them in future. On this occasion the students showed a play showing how an addict tries to hang his mother when he does not get the money for his addiction who is saved by the neighbors, than taken to the de-addiction doctor as an addiction is Disease which is curable. Everybody took the oath for not becoming addicted in the future & promised to de-addict someone by getting his treated. Mr Neeraj Nagori the Principal of the Mahila ITI thanked Dr P.C. Jain & Heena Goswami conducted the program.
