

Retrospective review!

Things are changing so is the politics. Voters have begun to realize the power they have, and on the same lines, then politicians have started honouring and minding their words. Voters are now asking about the development and politicians are questioned publically for any failure. Politics is no more a matter of enjoying the power; it now is a crown with thorns.

All this is good, especially the part of voters waking up to their responsibilities. In the changes that we are witnessing, one another essential and required change is making people accountable. And for that, after every session or term, the people in the chair should be asked to present the details of work accomplished. With that, they should have reasons why some tasks could not be completed and what they could have done better to avoid such failures.

This mechanism is common and an integral part of the software industry. Teams are divided based on functional capacity, and each member is assigned one of more tasks to be completed within the stipulated time frame. After the time frame is complete, the member is supposed to explain all the impediments they faced. The responsible members have their reasons for the delay or non-performance, the senior guide them what better could have been done to get things done more smoothly.

Politicians, still talk about future promises in all their rallies. What if they are asked to present a record of what they did in their last tenure? Or if the politician is asking for votes being in the opposition in the previous tenure, what better the present government

Editorial

could have done for better development. These talks are useful and can impress the public immensely.

But, this is very difficult if the politician did not work for the public or the politician in the opposition has no blueprint of development.

It is like a politician being a professional who has worked in some organizations and is seeking a job in the other company. The professionals not only have to prove their mettle when they take the interview, but they also have to ensure the future employer that they will work in best possible and suitable way to benefit the organization. Precisely this is required to be done by the politicians.

Politics and government have to be a most professional system in the country as it runs the country. But, unfortunately the way it is run generally leaves the people in the mid of everything. Things started but not completed. Budget allocated but not utilized. And so on.

Now how this will happen?

This needs us to changes the mindset. The people decide what they will have. So, if some politician talks more about promises than achievement or blueprints, ignore them. The new trend must be communicated across to the new generation of politicians. We need accountability and we will need to ask for the same.

Ashish Khatri gets patent for the eco-friendly machine

Udaipur: Ashish Khatri, an emerging scientist from Udaipur, has got a patent for his Banana Peeling Machine.

Ashish claims that it will benefit the environment and will also help in decreasing the effect of global warming by 8-10%.

DSIR department of the government of India has earlier awarded Ashish with a Rs 1 lakh fund under the Technology Entrepreneurship Program. Ashish's achievements also include the "Budding Innovators Award" in 2010, which was given to him by the National Research Development Corporation under the Ministry of Science and Technology.

What is the Banana Peeling Machine

Ashish began work on this machine way back in 2004 when he was a student. This project was undertaken by him under the guidance of Dr. NS Rathore and DR SM Mathur.

The machine peels off banana fiber and can this fiber can be used to make eco-friendly paper.

This machine was first made with wood, to test the effectiveness. Later it was manufactured with metal. The BPM is 10 ft long and 4ft wide. Banana leaves are the raw material for this machine. The machine produces banana fiber out of the banana leaves and these can then be used to manufacture paper, cloth, natural diapers, plywood as well as cattle sterilization medicine and kidney stone medication.

Ashish's invention has also been mentioned in the first blogger magazine, "Bloggers Park" which is published from New York.

Karnataka: If verdict hung than....

Bangalore: In case of a hung Assembly, HD Deve Gowda and HD Kumaraswamy's party looks likely to ally with the BJP. With elections to the Karnataka Assembly round the corner and the spectre of a hung house a distinct possibility, the real beneficiary in that case will undoubtedly be the Janata Dal (Secular). The JD(S) leadership of the father-son duo, former Prime Minister HD Deve Gowda and former Chief Minister HD Kumaraswamy, is putting on a confident face in asserting they will emerge winner on their own. But the situation on the ground does not tally with this assertion. The other key question is which way the party will go in the event of a hung Assembly. Assuming the Congress and the BJP are neck to neck, all indications are that the JD(S) will go with the BJP. The reasons are widely known. First, there has been personal bad blood between Gowda and Kumaraswamy on one hand and Chief Minister Siddaramaiah on the other. The animosity goes back to the days when Siddaramaiah was with the JD(S) and more importantly was Gowda's right hand man. In 2006, Siddaramaiah called it quits when Gowda sidelined him and promoted his son Kumaraswamy. Siddaramaiah, who joined the Congress, went on to become Chief Minister in 2013.

The successful defiance has never gone down well with the Gowda family. Obviously, they wouldn't want to see the renegade continue as Chief Minister for one more term. The other reason for the JD(S)'s possible support for the BJP is that the saffron party's central leadership has already sent feelers to the Gowda family that they count on its support in the event of a hung Assembly. According to one assessment, in the old Mysuru region where the BJP is not yet a force to reckon with, the party appears to have deliberately fielded weaker candidates in several constituencies to ensure that the anti-incumbency vote is not split between the JD(S) and the BJP.

NeuroGen Brain & Spine Institute Stem Cell Therapy - Free Stem cell Therapy Camp on May 13

Udaipur: NeuroGen Brain and Spine Institute, based out of Mumbai and is India's leading Stem Cell Therapy Centre that offers a comprehensive approach for children with Neurological Disorders.

NeuroGen BSI has been set up to help patients suffering from incurable neurological disorders, get relief from their symptoms and physical disabilities by the use of stem cell therapy in a safe and effective way. NeuroGen BSI offers stem cell therapy and holistic rehabilitation for Neurological Disorders like Autism, cerebral palsy, mental retardation, brain stroke, muscular dystrophy, spinal cord injury, head injury, Cerebellar ataxia, dementia, motor neuron disease, multiple sclerosis and neuropsychiatric disorders. Till date, the organization has already successfully treated 6000 patients from over 50 countries.

NeuroGen Brain and Spine Institute is organizing a free workshop cum OPD consultation camp on May 13, 2018 in Udaipur city for all Neurological disorders patients residing in Rajasthan. This camp is being organized to facilitate the patients as NeuroGen understands patients with spinal cord injury, muscular dystrophy, Autism, Cerebral Palsy, etc traveling is extremely difficult all the way to Mumbai for just consultation purpose. All those patients suffering from such incurable neu-

rological disorders can contact for appointments for this free camp to Mona 09920200400 / Pushkala 09821529653.

Dr Alok Sharma Professor & Head of Neurosurgery, LTMG Hospital & LTM Medical College, Sion Mumbai and Director NeuroGen Brain & Spine Institute said "A look at the development of the advances in the medical sciences shows that the solutions to difficult untreatable disorders have always come from a multi-disciplinary approach. It is only when people from different specialties pool their knowledge, skills and resources, that breakthroughs happen in incurable or difficult to treat medical conditions."

Dr Nandini Gokulchandran, Deputy Director and Head Medical Services, NeuroGen Brain and Spine Institute said "Signs and symptoms of Global developmental delay usually show in the first year of life. The predominant symptoms and signs of GDD are related to motor difficulties, which are the consequence of the brain damage.

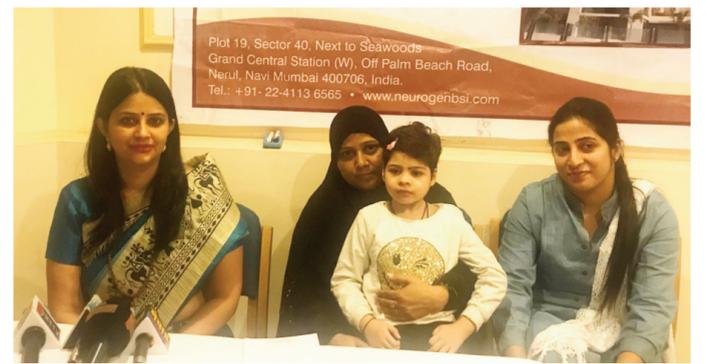

The extension and severity of the brain lesion is the leading factor in the magnitude of the motor deficit. Many of the symptoms observed in these children are related to the primary problem that is impaired motor functions. Some of the symptoms a child may display would include developmental motor delay, gait disorders,

poor fine and gross motor coordination, swallowing disorders, or speech delay are all the result of the basic motor disorder. GDD affects approximately one to three out of every thousand children born. However, it is much higher in infants born with very low weight and in premature infants. Most of the causes of GDD do not have specific, curative treatments."

Dr Nandini Gokulchandran said "Although, these treatment option help improve the quality of life for these patients, they do not solve the problem to its core. Modern medicine and research have together thrown light on the potential use of stem cells for curbing the disastrous effects seen in GDD."

Hiba was born a full-term delivery by cesarean, due to mucus congestion in lungs. She did not cry immediately after birth. All her motor milestones were delayed. She was taken to Children's specialist at around 1 year of age and due to frequent illness where she was recommended to undergo a MRI.

This suggested some deformity in brain leading to developmental delay. Hiba's parents consulted two to three doctors but no one suggested any treatment for the same. At the age of 1.5 years, Hiba started suffering a series of seizures. The first one lasting for about 5 mins was a silent seizure dur-

ing which she was fisting with froth coming out of her mouth followed by bluish coloration of lips. She was unconscious for 8 hrs post this episode. Physiotherapy was started along with some anti-epileptic drugs. Such occurrences kept on happening with a total of 4 more episodes with almost the same outcome and condition. When Hiba's parents learnt about that their child can be treated through stem cell therapy they immediately consulted the doctors from NeuroGen, sent reports to the doctors through telephone and e mail, and when they received a positive response from NeuroGen experts that Stem Cell Therapy followed by Neuro Rehabilitation can help their child, Hiba visited NeuroGen in November 2017 for treatment.

On examination the Chief complaints found in Hiba was that

of Poor attention, could not arouse and sustain. Could not follow instructions. Poor cognitive abilities, not age appropriate (could not perform as per her current age on reasoning, abstract thinking, memory, comprehension). Poor (No) Judgment in respect to danger and surround. No awareness.

Could not imitate actions and gestures. Could not receive and expressed emotions appropriately. Poor in social interaction, could not pursue basic level relationship. Could not speak. Poor communicative skills. Could not understand Verbal & Nonverbal cues. Could not convey her needs. She was dependent for All Day Living Activities such as eating, dressing, etc. She was not toilet trained.

The improvements seen in Hiba after Stem Cell Therapy are that now Hiba can now rec-

ognize objects and family members. Orientation to place has improved. Reduction in stubborn behavior. Memory has improved. Improvement in posture and overall strength in upper and lower limbs. Improved gait. Lying, sitting and standing tolerance has improved. Chewing, swallowing, eye contact, danger awareness has improved. Improvements in All Day Living Activities. Indicates bladder and bowel movements through gestures. Responsiveness towards commands has improved.

"Hiba is showing gradual and noticeable improvement", says Mrs. Shakila Khan, Maternal Grand Mother of Hiba. "Kids who face such difficulties at an early age should be shown acceptance and loved equally. This gives them a better scope of recovery", Mrs. Shakila adds

1149 Cochlear Implant Surgeries have been conducted Successfully during The Last 4 Years

Shri Krishan Pal Gurjar, Minister of State for Social Justice & Empowerment has said that 1149 Cochlear Implant Surgeries have been conducted successfully during the last 4 years (from 2014-15 to 2017-18). Ali Yavar Jung National Institute for Speech and Hearing Disabilities (AYNSHD), Mumbai is the Nodal Agency for Cochlear Implant Surgeries and the Government has empanelled 172 Hospitals (both Government & Private) throughout the country for Cochlear Implant Surgeries. He was addressing after inaugurating the 'Cochlear Implant Awareness Programme' entitled 'Swar Swagatam' organized by Department of Empowerment of Persons with Disabilities (Divyangjan), Ministry of Social Justice and Empowerment in association with Indian Red Cross Society and Sarvodaya Hospital and Research Centre in Faridabad, Haryana today.

The Minister said that under ADIP Scheme of the Department of Empowerment of Persons with Disabilities (Divyangjan), there is a provision for Cochlear Implant surgeries of Hearing Impaired children's up to the age of 5 years at the cost of Rs. 6.00 Lakhs per unit. After successful Cochlear Implant Surgeries, the child is able to hear and speak like normal Children. He opined that

such awareness programs are of great importance for creating awareness among the public about the Cochlear Implant Programme under ADIP Scheme of the Department.

Smt. Shakuntala Doley Gamlin, Secretary, DEPwD (Divyangjan); Dr Ashok Kumar Sinha, Director NIHH; Dr. Prabodh Seth, Joint Secretary, (Divyangjan); Shri D.R. Sareen Managing Director, ALIMCO; Shri D. R. Sharma, General Secretary, Indian Red Cross Society (Haryana State); Dr Rakesh Gupta, Chairman, Sarvodaya Hospital; and Dr Ravi Bhatia, HoD, Centre for ENT & Cochlear Implant, Sarvodaya Hospital also addressed the gathering.

Cochlear Implant is a modern technology to help young children who have severe to profound deafness in both ears. Because of hearing impairment, they are not able to speak. Cochlear Implant provides such children to hear normally in one ear and with post surgical rehabilitation they are able to speak also. Cochlear Implants are costly and were not affordable by all. Keeping in mind "Sabka Sath Sabka Vikas", the DEPwD, Ministry of SJ&E is providing benefit of modern technology to poor persons also. It is in this direction, the Ministry has introduced

Cochlear Implant programme under revised Scheme of Assistance to Disabled Persons for Purchase/Fitting of Aids and Appliances (ADIP) for the poor and needy young children. With the implementation of Cochlear Implant program by the Ministry of SJ&E through Ali Yavar Jung National Institute of Speech and Hearing Disabilities (Divyangjan), Mumbai, around 1149 surgeries (916 under ADIP Scheme and 233 under CSR) have been conducted across India. The Applicants have to apply based on advertisement/details on the website to AYNSHD, Mumbai: adipocholearimplant.in.

All the children are undergoing post-operative rehabilitation. The Ministry has empanelled 172 hospitals all over India to conduct the cochlear implant surgery. Most important outcome of this program is reduction in the cost of implantation and empowers children with deafness to hear and develop speech.

Sarvodaya Hospital & Research Centre, Faridabad has been part of this scheme and has operated 30 kids from different parts of North India. Dr Ravi Bhatia, Senior Consultant, Sarvodaya Hospital & Research Centre is doing Cochlear Implant for last 2 years.

Jugnoo Brings Market to your door

Udaipur: Jugnoo, India's largest auto aggregator and a leading hyperlocal startup, forays into on-demand hyperlocal delivery in Udaipur with the latest addition in 'Fatafat' vertical. Now Fatafat will facilitate the residents of Udaipur to order food from their favorite restaurants, ready to eat meals, grocery, fresh fruits and vegetables, OTC medicines, gifts, flowers and farm fresh milk at their doorsteps. Thus, Jugnoo aims to become a one-stop solution for all the daily hyperlocal needs of its users.

Fatafat vertical in the Jugnoo app provides groceries, fruits and vegetables or no minimum price and offers free of cost delivery for orders above Rs. 499. Fatafat serves more than hundred orders everyday in Udaipur and as the name suggests, it thrives on its USP of delivering products in the least possible time. The customers can choose products from the wide range of meals, restaurants and Jugnoo Grocery. The request is then completed with the help of Jugnoo drivers.

Talking about the launch, Jaspal Singh, Business Head said "Jugnoo thrives on the goal of Buy Local and Empower Local Businesses, in its bid to expand the footprints across more cities. Also with Fatafat service Jugnoo has been successful in onboarding the local retailers onto its platform to compete with the big e-com players."

Samar Singla, CEO & Founder of Jugnoo comments, "With this launch, we are taking a step ahead towards our objective of expanding across India with our verticals of on-demand space. With Fatafat, we are working towards creating a demand for local shopkeepers/service providers and fulfilling these demands in fastest time possible. The idea is to establish Jugnoo as a key player in the market for providing all kinds of hyperlocal deliveries".

Chopra, and Bengali star Prosenjit Chatterjee. The movie is scheduled to release on June 1.

Toyota Yaris bookings open

Udaipur: Toyota Kirloskar Motor announced the opening of pre-launch bookings for the highly anticipated Toyota Yaris. Designed to be as Advanced as it is Prestigious, the world-class sedan has garnered much appreciation ever since it's unveiling at Auto Expo 2018. Customers can make their bookings at any of the authorized Toyota dealerships across the country with deliveries beginning from May 2018.

The Toyota Yaris comes at an Introductory price in the range of ₹ 8,75,000/- to ₹ 14,07,000/- . Toyota has decided to keep the prices same across the nation. "Marking Toyota's entry into the mid-sized sedan segment, Toyota Yaris promises to deliver the true Toyota experience with its unique presence and advanced functions for the discerning Indian customers. Toyota Yaris built on the Toyota philosophy of QDR (quality, durability & reliability) offering is loaded with a wide range of best in class features:

Speaking to the customers on this announcement, Mr. N Raja, Deputy Managing Director, Toyota Kirloskar Motor said, "Toyota Yaris has already won nationwide appreciation for its class-leading features, superior comfort, top-notch quality and excellent performance. We thank our customers for such a heartening and exciting welcome for Toyota's debut in the B-High sedan segment in India. As a sedan with great individuality and intuitive functions for people who constantly seek for something better, we aim to offer quality that exceeds its class. We hope customers well accept the world class sedan Toyota Yaris for the value propositions it has to offer in the segment. Toyota Yaris will be on display across all Toyota dealerships in India and customers may book for the test drive immediately"

The Yaris, which underpins Toyota's presence in the Indian car market, will be offered in a 1.5L Dual VVTi Gasoline Engine with a 7 speed CVT (Continuous Variable Transmission) or 6 speed MT (Manual Transmission) options. Catering to the emerging need for automatics in the segment, the CVT option will be made available across all trims. "Prices will be same across the country ex-showroom level, however the final on road price may vary based on local road tax and levies. Booking amount will be Rs 50,000/-

Project work commences for Road Under Bridge at Thokar Chauraha

Udaipur: last year, in the month of January that the Urban Improvement Trust (UIT) and the Railways decided to construct a Road Under Bridge at Thokar Chauraha. The tenders have been processed and the Rs 2.36 Crore project has been allotted. The project is expected to take nine months to complete. UIT president Ravindra Srimali said that the RUB at Thokar will provide much-awaited relief to those residing or working at Pratap Nagar, Dabok Airport, Hiran Magri and specially Madri Industrial area.

As a part of the joint association towards the project, the UIT has disbursed an amount of Rs 50 lakh to the Railways, as the first installment of UIT's share. The Project is being managed by the Railways.
