

MLSU: 29th convocation full of innovations

Udaipur: The 29th Convocation of Mohan Lal Sukhadia University was held on Wednesday at Vivekananda Auditorium with grand and various innovations. The Chancellor and Governor Kalraj Mishra presented gold medals to 105 students and Ph.D. degrees to 180.

Many new inventions have been initiated in this convocation. Group photo of the gold medal winners was done after the program with the honorable Chancellor. The tradition of group photos has been introduced for the first time. Along with this, for the first time, the Convocation Register was also started, in which the information of the degrees and gold medalists awarded on the occasion of the convocation was recorded, the Honorable Chancellor recorded his remarks.

It is the first university of its kind to take such initiative. The entire auditorium was lavishly furnished for the convocation. An exhibition of handicrafts, folk arts, and books was also organized in the auditorium courtyard, the main attraction.

The use of information technology and digital media has opened the doors of new teaching methods - Governor.

While addressing the convocation, Chancellor and Governor Kalraj Mishra said that the convocation ceremony was the proudest moment in the education world. This is such an essential occasion in the student's life when after completing the learned knowledge, one now has to present himself to apply it in practical life. I want the students to fully train from here to dedicate their knowledge and paramount abilities to the people's

of the explosion of information related to knowledge and science, so you people should spread such education which will make the student capable of expertise in all respects.

Governor Mishra said that our ancient Indian education system inspired the country's new education policy. I have studied the new education policy deeply and have found that it has been prepared after a lot of thought in the students' interest in such a way that the students get all-around devel-

opment from it. It has a sublime approach to allow the student to learn about his subject and many other subjects.

opment from it. It has a sublime approach to allow the student to learn about his subject and many other subjects.

The Governor said that I want such latest innovations to be made under the courses in the universities so that the students at all levels can benefit from any dimension of knowledge but many dimensions.

Governor Mishra said that education is changing rapidly in our country. The role of information technology that has come to the fore during the corona pandemic has opened a new avenue parallel to the traditional teaching

wide. I believe that if we do research in any matter, its goal should be that research is helpful for human welfare. There is also a great need for continuous updating of the education curriculum. Universities should update their syllabus from time to time. Add the latest knowledge books to your libraries. Various university departments organize such dialogues of scholars in their own right so that students get interested in deep knowledge related to the subject. I want universities to become such light centers of learning from which students work for the welfare of society and the nation. Looking at the number of girls in the gold medal, he said that girls are getting ahead of the students; this is a good sign for girls' child education.

Rajasthan government is always trying to make higher education meaningful - Higher Education Minister

Higher Education Minister Rajendra Singh Yadav, the special guest of the function, said that as much as elemen-

tary education is essential, university education is equally important because it determines the direction and condition of our life. He said that there are many people who cannot get an education according to the subject of their interest or are not able to get desired employment through desired subjects, but now the time has changed. Through the new education policy, further stages of education have been decided. Immense possibilities have been creat-

ed for selecting subjects according to interest and moving forward to get employment. In the last two and a half years, the Rajasthan government has always been striving towards making higher education important. Be it the issue of opening new colleges or giving scholarships to needy children. In every field, whether it is the appointment of new teachers or resource development, the government has made relentless efforts to strengthen higher education. The government is creating new posts, and the process of recruitment will also be started soon. As the Minister of Higher Education, he said that I would also try my best to ensure that the children residing in every region of Rajasthan get full opportunities for higher education.

He congratulated the Vice-Chancellor of Mohanlal Sukhadia University for doing a great job in education and research.

The Higher Education Minister said that to meet the educational challenges in the future, universities should make innovative preparations through technical cooperation to create new employment opportunities. Seeing the high number of girl students in the gold medal, he told the students that this was a warning bell. If the students do not improve their study work in time, then

born here and its art, history, music, culture, and customs. But above all, I love India because it stands as an international beacon of democracy, diversity, and peacemaking.

He said that we should think of education as a means of developing our greatest potentials because each has a personal hope and dream, which can be fulfilled, in great power for the benefit of all and our nation. It can be translated. I ask all you graduates, what is your hope and dream? Think big, not small. I ask you to think about what you can do to turn that personal hope and dream into something that benefits the people and has greater strength for India as a nation. He said that our diversity is our strength. India continues on its journey towards mutual harmony and harmony. It needs the help of your graduates to complete that journey successfully. I believe that if you make your journey one of heart, in which you grow hope, empathy, genuineness, resilience, and trust, you and India will reach the destination. This may sound like an exaggeration, but while requesting you to think that nothing is impossible, let me tell you why I don't believe so. No hope should be enough for you, and no dream should be so big that you can achieve it. If you imagine it, you believe in it, and you

can achieve it. He said that my story is a testimony that if you make it your journey, then anything is possible. I believe the same will be valid for you. Quality education has helped develop the creativity, compassion, and commitment needed to make the economic ladder stronger, a step higher, and enable more people to climb it. He told the students that I ask you to think nothing is impossible. You can make the impossible possible. Your best days are ahead of you.

India is a country of possibilities and hopes - Bhargava.

On this occasion, the Director-General of the Indian Council of Medical Research, Prof. Balram Bhargava, said that India is a country of possibilities and hopes with maximum youth. He said that Covid had affected the whole world for the last year, and India was not untouched by it, but the Government of India and the State Governments took appropriate measures to deal with Corona. Our covid management is appreciated all over the world. He said that education makes a person civilized and humble. We all should invest
